

Designed to DIN Standard

- Higher pressure capability among rubber bellows seals
- Outstanding performance & long life
- Metal material is SUS316 as a standard
- Easy handling

Unitized Rotating Seal Assembly

Easy handling and installation

Bellows Provides High Axial Flexibility

Bellows absorbs high degree of axial shaft movement

Easy Installation

Rotating part can be installed easily because bellows' grip portion is located on opposite side of the sealing face

Seal Ring

Seal ring is free from any installation stress. Therefore no distortion is anticipated

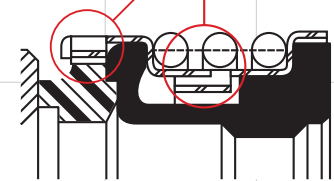

Face of Seal Ring

Narrow face leads to low torque

Cup Gasket

For low pressure : Solid rubber
For high pressure : Metal washer is embedded in rubber

Drive Mechanism

Drive Mechanism

Pressed tabs provide positive drive
